| Lahore, Pakistan

Experience Summary

Software Engineer with hands-on experience in building scalable web applications using Java (Spring Boot), React (TypeScript), and Microsoft Azure. Skilled in designing RESTful APIs, implementing microservices, and deploying containerized environments using Docker. Experienced in integrating external systems, mentoring junior developers, and optimizing performance across backend and frontend layers. Passionate about clean code, system design, and delivering user-centric solutions.

Work Experience

NetSol Technologies (Software Engineer)

Oct 2023 - Present

- Designed and implemented RESTful APIs using Java Spring Boot within a microservices architecture, applying core Spring features such as Spring Data JPA, Spring Security, Spring Batch and Spring Cloud to ensure modularity, scalability, and maintainability
- Taking performance optimization initiatives, Improved system performance by up to 40% through code refactoring, database tuning, and resolving technical debt across core modules and legacy components.
- Developed responsive, interactive user interfaces using React with TypeScript, leveraging its component-based architecture.
- Mentored junior developers through code reviews and knowledge-sharing sessions, fostering team growth and collaboration.
- Leveraged Microsoft Fabric to process external data efficiently and deliver insights to internal applications.
- Integration of External Care and Financial systems such as Xero, Sage 200, QuickBooks and Nourish, ensuring seamless data exchange and business logic alignment.
- Configured and deployed containerized services using Docker, setting up a complete environment with database, RabbitMQ, and microservices on an Azure VM for streamlined development and testing.

NEP-NIC Gujrat Center (Junior Java Developer)

Jan 2023 - Mar 2023

- Worked in our University's Business Incubation Center as a Junior Java Developer for a startup.
- Built secure APIs using Spring Boot and implemented Spring Security for user authentication.
- Wrote Complex SQL Queries for business reports.

Education

University of Gujrat, Gujrat, Pakistan

Sep 2019 - Sep 2023

Bachelors in Computer Science

Technical Skills

- Performance Optimization, Clean Code, Scalability, Problem Solving.
- Strong understanding of Object-oriented principles.
- Database Design and Scalability.
- Ability to create dynamic web pages using React with both JavaScript and TypeScript.
- Planned and created software solutions with clear design and reliable features for different needs.

Project Work

I have worked on a variety of complex systems with a focus on performance, user experience, and business logic. Some of my noticeable work done in them is as follows:

- **RodaBI (Care Monitoring and Accounting Software | Spring Boot & React.ts | delphi.care)**
 - This platform enables comprehensive tracking of care delivery, incident reporting, staffing metrics and financial reporting ensuring services are both efficient and compliant.
 - Developed a comprehensive system with roles and permissions to manage users and business performance of organizations.
 - Integrated real-time notification updates and created business reports for enhanced decision-making that provide insights into operational performance, care quality, and financial metrics.
- **Fitpair (Social Fitness Platform | MEAN Stack | fit-pair.com)**
 - Developed the backend for FitPair, a social networking app that connects users with local workout partners, facilitates fitness challenges, and offers rewards for achievements.
 - Implemented features such as a muscle diagram for targeted workouts, fitness calculators, and a redemption store for exclusive vouchers.
 - Developed an admin panel for it, enabling management of user profiles, fitness challenges, and reward distributions. The panel includes real-time data monitoring, user activity tracking, and content management tools, streamlining administrative tasks and enhancing operational efficiency.
- **Dealdiva (Deal Community | Spring Boot & React.ts | MVP for Startup)**
 - Developed a full-stack deal aggregation platform inspired by HotUKDeals using Spring Boot and React with TypeScript. Delivered this MVP as a proof-of-concept for the UK-based startup "Dealdiva".
 - Implemented secure authentication and authorization, featuring token-based user login, role-based access control, and protected endpoints.
 - Engineered an admin control panel to manage entities such as users, categories, subcategories, and products—streamlining content administration.
 - Integrated an interactive user-driven rating system, enabling real-time voting and deal ranking for enhanced engagement.
 - Architected a referral-based cashback mechanism, allowing users to earn rewards autonomously when they bring new users via referrals.

Achievements

- **Netsol Technologies:** Awarded Green Slip for professionalism, high performance, reliability, and strong commitment to quality deliverables.

Tools and Technologies

- Frontend: React (JavaScript/TypeScript), Redux, SCSS
- Backend: Java (Spring Boot, Spring AI, Spring Batch, Spring Cloud), Ruby on Rails, Node.js
- Database: MS SQL Server, MySQL, Mongo DB
- Cloud & DevOps: Docker, Microsoft Azure (Storage, SQL Instances)
- Others: Git, ChatGPT, Jira, Deepseek, Cursor.ai, Copilot
